Allowable Subject Matter

1. Claims 1-20 are allowed.

Independent claim 1 recites a motion vector prediction method including "...organizing a set of reference pictures into a pair of lists and according to each reference picture within said lists at least one reference index; associating with selected ones of said blocks in said video signal at least one motion vector that references a respective one of said lists, each vector associated with a selected one of the blocks referencing a different list of said lists, each vector defining disposition of said selected one of the blocks relative to a reference picture in the respective one of said lists; and, computing a predicted value for a current vector of said vectors for a current block from vectors of adjacent blocks referencing a same list of reference pictures as the current vector, wherein prediction of a motion vector that selects a reference picture using a first list of reference pictures is not dependent upon motion vectors whose reference pictures are selected using a second list of reference pictures..." which is not anticipated nor obvious over the art of record. Dependent claims 2-20 are allowed for the reasons concerning the independent claims.
